

WesternBright® ECL Spray

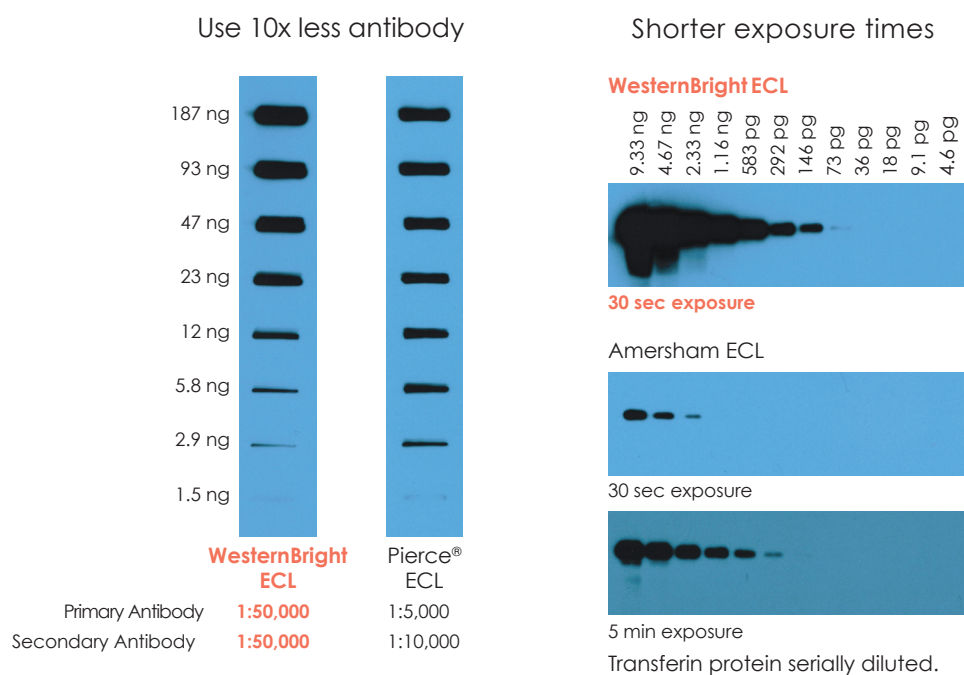

Sensitive HRP substrate for chemiluminescent Western blots imaged using film

WesternBright ECL substrate is optimized for chemiluminescent Western blots imaged using film. **WesternBright ECL Spray** gives you both components of WesternBright ECL in one convenient spray device. No measuring or mixing required – just spray the reagent onto a blot and image. WesternBright ECL's strong signal allows you to use up to ten times less antibody than other substrates, so you can conserve your precious antibodies and samples. Additionally, WesternBright ECL Spray eliminates pre-measuring and mixing steps so you use fewer pipettes, tips and tubes resulting in additional savings and reduced waste.

Advantages

- **EASY-TO-USE SPRAY** – Just point and spray. No pipetting, measuring or mixing required
- **HIGH SENSITIVITY** – Detect low pg protein amounts
- **4X MORE SENSITIVE THAN COMPETITIVE SUBSTRATES** – Stronger signal than Amersham™ or Pierce™ ECL
- **SIGNAL THAT LASTS** – Image blot up to 6 hours after substrate incubation
- **USE LESS ANTIBODY** – Use up to ten times less antibody
